Water Protection Policy

Purpose

The company acknowledges a responsibility to the protection of water, and we express our commitment towards implementing practices which will promote water protection efforts and policy

In 2002 the Environment Protection Act was amended by the Environment Protection (Resource Efficiency) Act to allow the Authority scope to develop waste management policies (SFPL) This change means that policies that deal with municipal waste can also be developed, thereby complementing existing arrangements and ensuring that a comprehensive framework of statutory policy can be maintained and strengthened.

(SFPL) cover the full waste cycle from generation and use through to disposal, treatment (SFPL) may also allocate responsibility for industrial waste management operations and disposal, and establish the level of technology that should be applied to processes involving wastes.

This policy aims to ensure that resource recovery facilities are managed in a manner that minimizes risks of harm to human health and the environment from fire. Compliance with the Management and storage of combustible recyclable and waste materials guideline (publication 1667) will be taken to mean compliance with this policy.

This policy relates to how all operations in our company will be continually reviewed and improved, so that we will truly be able to protect water from any danger/contamination and social considerations into our everyday practices

The company will consistently strive to raise awareness in the community, encourage participation and train employees in water protection matters.

Principles:

- Comply with any laws governing the water protection of government of Pakistan and international regulations as well and actively look for ways to improve on these guidelines.
- Work towards the conservation of water and resources in all our operations and improve efficiency
- Strive to better understand both the direct and indirect impact that our practices may have on the water
- Promote water protection awareness throughout all operations of the company
- Provide training to staff on implementing our sustainable policies
- Regularly review our business practices, and determine whether each practice is suitable in an environmental context and water protection.
- Independently energy audits our practices, and determines whether our goals have been reached
- Minimization of water use by engineering controls development
- Objective targets and management program related to water conservation and water use
